

STRICTLY PRIVATE AND CONFIDENTIAL | TEASER

Project Orvelle

A digital-first Indian fashion brand built on repeat customers
Growth equity raise of ₹20 crore

October 2026 | Prepared by Tarana Bansal

Orvelle is a live demonstration brand; all figures are base-case model outputs, not audited results. Not an offer of securities.

Investment highlights

Why Orvelle is worth a closer look

01

Repeat customers drive the model

21% of a month's new buyers order again the next month, and repeat orders carry no acquisition cost.

02

Profitable within six months

EBITDA turns positive in month 6 on plan, and cash never falls below ₹2.65 crore.

03

Unit economics that pay back fast

Lifetime value of ₹2,770 against a blended acquisition cost of ₹1,120: 2.47x, with payback in about a month.

04

Fourfold growth in five years

Net revenue from ₹13.2 crore to ₹53.9 crore, with EBITDA margin rising to 20.6%.

05

Built on live infrastructure

A working mobile store and a finance studio that compares plan with actual orders every day.

Business overview

How Orvelle acquires, converts and keeps customers

- **What it is:** a direct-to-consumer fashion brand selling through its own mobile-first store, with no marketplace commissions.
- **How it grows:** paid social acquisition at ₹1,452 a customer, plus 38% more customers arriving organically for every paid one.
- **How it keeps them:** cohorts reorder on a predictable decay curve, settling at a long-run monthly repeat rate of 1.8%.
- **How it runs:** 26 people today; inventory of about 118 days, financed partly by 62 days of supplier credit.
- **How it is managed:** a cohort-based operating model feeds three statements, valuation and a live plan-versus-actual view.

Financial summary

Five-year base case, ₹ crore

	Year 1	Year 2	Year 3	Year 4	Year 5
Orders ('000)	55.7	89.0	121.2	154.7	187.4
Net revenue	13.21	22.15	31.64	42.39	53.93
Contribution after marketing (CM3)	3.25	6.66	10.27	14.65	19.68
EBITDA	(0.06)	2.36	4.81	7.77	11.12
EBITDA margin	(0.4%)	10.7%	15.2%	18.3%	20.6%
Profit after tax	(1.17)	1.12	2.53	5.08	7.42

Revenue is built bottom up from monthly cohorts: marketing spend ÷ acquisition cost gives new customers, and each cohort reorders on a decay curve.

The opportunity

A ₹20 crore growth round to accelerate a self-funding plan

- **Need:** the plan funds itself from operating cash; the round accelerates acquisition and inventory rather than covering losses.
- **Size and timing:** ₹20 crore, modelled for month 19, on a pre-money of ₹120 crore (₹140 crore post-money, 14.3% for new investors). Final pricing will reflect performance by then.
- **Ownership after the round:** founders 64.3%, option pool 7.1%, seed investors 14.3%, Series A 14.3%.
- **Investor protection:** 1x non-participating liquidation preference.

Use of funds

- 54% customer acquisition
- 20% inventory and working capital
- 26% team and technology

Indicative valuation today

Internal analysis; equity value, ₹ crore

- **DCF:** WACC of 14.6% (cost of equity 16.3%, levered beta 1.13), exit at 11x year-5 EBITDA; enterprise value ₹68.5 crore, equity value ₹69.2 crore. Terminal value is about 90% of the total; a Gordon growth check at 5% gives ₹69.5 crore.
- **Multiples:** EV/EBITDA on year 3 and EV/revenue on year 2, at a private-company discount to listed Indian apparel peers.
- **Venture method:** year-5 exit equity of ₹154 crore discounted at a 35% target IRR gives ₹34.4 crore today.

Peer and precedent multiples are illustrative placeholders shaped like the Indian listed set; they would be refreshed from filings before any real process.
